Yousef Salman

Junior .NET Backend Developer

Amman, Jordan | +962799882249 | yusefsalman13@gmail.com
LinkedIn | GitHub | Portfolio

Summary

Results-driven **.NET Backend Developer** with a strong foundation in building secure, scalable RESTful APIs and distributed systems using **C#**, **ASP.NET Core**, and **Entity Framework Core**. Experienced in architecting robust relational database schemas with **PostgreSQL** and **SQL Server**, enforcing high-concurrency data integrity (ACID, Concurrency Tokens), and implementing enterprise authentication pipelines (**JWT**, BCrypt). Passionate about clean architecture, performance optimization, and writing clean, testable code.

Education

Tafila Technical University Oct 2023 – June 2027
B.Sc. in Artificial Intelligence *Jordan*

Technical Skills

Backend Development: C#, .NET Core, .NET Framework, ASP.NET Core Web API, Entity Framework Core, LINQ, RESTful API Design, Dependency Injection, Middleware, JWT Authentication, Identity.
Databases & ORM: PostgreSQL, Microsoft SQL Server, MySQL, Neon DB, Schema Design, Performance Indexing (B-Tree, Composite & Unique Indexes), Query Optimization.
Architecture & Engineering: Object-Oriented Programming (OOP), SOLID Principles, Double-Entry Accounting Logic, Optimistic Concurrency Control, Asynchronous Programming (async/await), Clean Architecture Basics.
Tools & Client Integration: Git & GitHub, Postman, Swagger/OpenAPI, Stripe API, Docker Basics, Familiarity with Frontend APIs (React.js, JSON handling).

Featured Projects

Warehouse Management System – Inventory & Stock Transfers | GitHub | Live Demo
Built a bilingual full-stack warehouse platform using **ASP.NET Core**, **React**, and **PostgreSQL**. Implemented audited inventory movements and atomic stock transfers with row locking and optimistic concurrency control. Added **Dapper** reports, scoped background low-stock checks, JWT role-based authorization, and xUnit entity tests. Deployed the Docker API to Render and the frontend to Vercel.

NovaPay – FinTech Digital Wallet & P2P Payment API | GitHub | Live Demo
Architected a high-concurrency FinTech digital wallet backend using **ASP.NET Core** and **PostgreSQL**. Enforced financial data integrity through strict double-entry bookkeeping (Ledger Entries) and database ACID transactions. Eliminated race conditions and double-spending risks via EF Core Optimistic Concurrency Tokens (`xmin`). Configured composite performance indexes, restricted cascade deletes, and decimal precision (18, 4) using Fluent API. Implemented JWT Bearer security, global exception middleware, and integrated Stripe API for balance top-ups.

LuxeStay – Boutique Hotel Booking Backend API | GitHub | Live Demo
Designed a scalable RESTful booking backend using **ASP.NET Core** and **PostgreSQL**. Built relational data models handling room inventory, dynamic reservation scheduling, and role-based authorization pipelines (RBAC) via JWT. Optimized database query performance through targeted indexing and LINQ projections. Integrated external AI service endpoints (Google Gemini) for automated recommendation workflows and deployed production backend infrastructure with automated environment configurations.

Languages

Arabic: Native | **English:** Conversational
